

Due to the shortage of staff in the Cell Culture Facility, we are forced to modify our activity.

Until further notice, cells ordered for thawing will be given in a T-25cm² flask and not in a T-75cm² flask as usual.

For the storage of new lines, please bring us frozen vials and not cells in culture. If you still want to bring us cells in culture, depending on our workload, we can only freeze 2-3 tubes and plan the usual storage later.
