

Your public key is in place on hpc-login (cluster front-end). You should be able to log in without a password on hpc-login. Only the passphrase of your local private key at your station will be requested :

```
ssh -Y <login>@hpc-login.u-strasbg.fr
```

For remote connections (outside the Osiris or UHA network), use the Unistra VPN prior to any connection to hpc-login :

<https://services-numeriques.unistra.fr/documentations/toutes-les-documentations/services-au-poste-d-e-travail/acces-distants-securises-vpn.htm>

Your initial disk quota is 500 GB. To be monitored with the diskquota command.
